fives

"Continuous improvement is the key to OYAK Cement's success here in Turkey and around the world. With Fives' support on our Darica FCB Horomill® improvement project, we're confident of its production capability for the decades to come."

Berkan Fidan,
Group CTO & Board Manager, CIMPOR Global Holdings BV

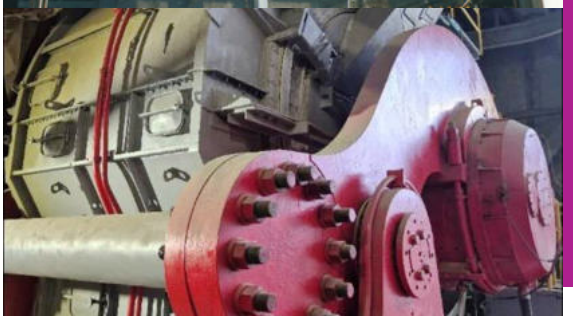

SUCCESS STORY

OYAK CEMENT (AS PART OF CIMPOR GLOBAL)

Darica plant • Darica, Turkey

Challenge: In 2024, OYAK Cement called upon Fives to make technical improvements to its Darica plant's FCB Horomill® 3600, which in 1996 was one of the first commissioned by the previous owner, Lafarge. OYAK Cement also wanted to switch from cement to pure slag production.

Response: Fives Services made a thorough mechanical and process analysis of the installation and proposed several upgrades and optimizations.

Result: For the first time since its original commissioning nearly 30 years earlier, the now modernized installation began producing pure slag in 2025.

Added value: Plant production today is achieving very high levels of reliability in this demanding grinding application in terms of both feed and final product fineness.
